ABSTRACT

Today, centralized solutions are used everywhere across all areas of our lives. But recently society has started to realize the shortcomings of centralized systems, and how the largest corporations conduct their business. Therefore, we are seeing tremendous growth in decentralized solutions that have emerged thanks to blockchain technologies.

Unfortunately, decentralized solutions can hardly be called convenient and user-friendly, which is crucial to reaching mass distribution. Our team has developed a set of technologies that are designed to form the basis for the decentralized Internet – Web 3.0. We took the most useful and applicable technological innovations and built decentralized products [OXI TOKEN, NFT MARKETPLACE, SNIPE BOT]. We designed our products to be user-friendly, accessible, and as understandable as centralized products, but without exploiting users' data or creating a single centralized point of authority or failure.

With such a mixture, we hope to show the general public all the benefits of using Blockchain technology through Oxi Token.

SUMMARY.

- 🌀 Oxifilab is a simple DeFi App to build a cryptocurrency asset and a strong community with a mission of launching our NFTs on the Binance NFT MarketPlace.
- 🌀 Oxifilab is a Futuristic NFT MarketPlace and DeFi Project.
- 🌀 Oxi is the official token of Oxifilab created on the BNBChain.
- 🌀 Oxi yields a 10% Reward of the total token held in the wallet every month, provided the holder has completely held the token for a total of 30 days.
- 🌀 Oxi will be the utility token of our soon to be developed NFT Market Place which will see our top holders get Oxi NFTs for free.
- 🌀 Early adopters/ Private Sale Holders can earn up to a 100% bonus based on the final token value.

Project Name:	OxiFi Lab
Chain:	BNB Smart Chain
Token Name:	Oxi
Symbol:	OXI
Ticker	
Total Supply:	20,000,000,000 [BURNABLE]
Contract Address	TBD

DISCLAIMER

It is our utmost desire that the information given in this white paper is accurate, up to date, and all the products, services, technical architecture, token distribution, company timeline; all these materials could have changed without any notice, and they can never be considered a binding agreement of the professional advice. The whitepaper does not bind any individual to enter into any contract or any binding legal commitment to the contribution. This white paper also does not make up any form or any part of any opinion which can be considered advice, which can sell, or which can solicit any offer by Oxifilab to purchase our token nor shall it be considered a part of any effect which can be used for the formation of contract or investment decision. This white paper also does not have any capacity to bind any person to enter any agreement or consider it a binding legal commitment to the contribution of the whitepaper.

INTRODUCTION.

The main problem with most tokens and NFTs is that of high transaction fees because they are mostly deployed on the Ethereum Blockchain. This is also one of the major setbacks startups face when trying to get their NFT projects on OpenSea.

In recent times, Ethereum has largely failed to meet the increasing demand in the decentralized world. This has given birth to rival blockchains, or so-called ‘Ethereum killers’ which have been successful in addressing the scalability issues.

Each of the alternative smart contract blockchains has a unique set of attributes, though they all use a different blockchain system known as Proof of Stake as opposed to Ethereum’s current Proof of Work. In this case, transactions are settled by consensus between proven holders of the cryptocurrency in question, resulting in lower energy consumption and a more scalable system. Here is how this looks for various platforms:

Binance Smart Chain (BSC), a rival to Ethereum, can process an average of 55 to 60 transactions per second. The project has grown exponentially since its launch in August 2020. In May 2021, BSC passed Ethereum by nearly 600% in terms of transaction volume.

And now in early 2022, it has recorded approximately 1.75 billion lifetime transactions since its launch in August 2020. Analytical data from BscScan, a sister product of Etherscan, reveals that Binance Smart Chain (BSC) surpassed 14.7 million blockchain transactions in November 2021.

THE OXIFILAB PROJECT

OXI Token

OXI is the utility token for the OxiFiLab Project, OXI is a BEP20 Token on the Binance Smart Chain. OXI token is a 20 billion Supply Token. OXI will be used as the default for transactions in the OxiFiLab Project which includes but is not limited to:

- 🌀 NFT Market Place
- 🌀 Snipe Bot Platform for DEFI Traders.

OxiFiLab NFT Market Place

NFT Marketplace brings artists and creators together on a single platform. Buy and sell exclusive NFTs created by global leading artists. OxifiLab NFT marketplace will be launched on the BNBChain rivalling major NFT Marketplaces like Rarables and Opensea. Features of OxiFiLab NFT Market Place include:

- 🌀 Low Listing Fees: Allowing Creators to make arts without worrying about high gas fees or transaction fees.
- 🌀 OpenSea of the BNBCHAIN.
- 🌀 Tradable Tokens
- 🌀 Detailed Transaction Info
- 🌀 Custom Fees and Limits

DEFI PROJECT

We decided to tag OxiFi a Futuristic DEFI Project Because of two features:

Yield Farming:

In Our Project, you'll get 10% of your Total OXI Tokens held in your wallet provided you can hold your tokens for a month at a time. Oxi Holders can get as much as 100% of their total tokens by simply just holding OXI tokens. This in turn will give OXI tokens the edge to make them more valuable on the Exchange Market, just in time for our NFT Market Place Launch in 2023.

Snipe Bot Platform for Traders:

When a new liquidity pool is created on a decentralized exchange (for example Uniswap) traders can profit if they are the first to buy the new tokens and then sell them to new buyers. This strategy is called sniping and the key is to be the first to buy the tokens when the liquidity pool is added to the decentralized exchange. It is preferred to buy these tokens in the same block, or the next several blocks, as the creation and funding of the liquidity pool.

We will build a sniping bot to monitor and trade liquidity pairs on decentralized exchanges and create an easy-to-use UI and make it accessible to the OxiFiLab Community.

AREAS OF FOCUS.

Sustainability

Our sustainability efforts will directly tie back to the mission of establishing a transparent environment for asset holders to get a substantial interest from their savings. Sustainability also means ensuring long-term success for the project.

IDO/ FUNDING

Oxifilab will launch its proprietary token on the BNB Chain named Oxi. With the help of an initial DEX offering (IDO), as well as private Sales and presales, funds will be raised for this project. An IDO is a new and exciting type of decentralized and permissionless crowdfunding platform, which is opening up a new way of fundraising in the crypto space.

If a project is launching an IDO, it means the project is launching a coin or token via a decentralized liquidity exchange. This is a type of crypto asset exchange that depends on liquidity pools where traders can swap tokens, including crypto coins and stable coins. For instance, USDT/ETH is a liquidity pair.

DAPP LOGIC

1. **OXI TOKEN (BEP20)** – These tokens conform to a standard called BEP20, which is similar to the Ethereum standard ERC20. The token standard ensures basic functionality for the token, such as transferring, returning a balance, viewing token ownership, and Token Burning.
2. **IDO CONTRACT** – This Contract will Hold OXI Token allocated for Private Sales/Presales, Public Sales, Airdrops & Giveaways. The functionality ensured in this contract are:
 - White Listing
 - Web 3 Token Purchase (MetaMask etc) [ALL SALES]
 - Massive Airdrops Distribution
3. **REWARD CONTRACT** – Holders of OXI Tokens interact with this Contract to get their monthly OXI Rewards. Logic: If {Holder has held OXI for a full month and has a minimum number of OXI required for bonus} then {Holder Gets 10% of Total Amount} else {They wait and try again the next month}

Ex: If Holder A holds 50,000,000 OXI and has held said tokens for a full month, they call the “claimReward()” Function and get 5,000,000 OXI Free.

TOKEN DISTRIBUTION

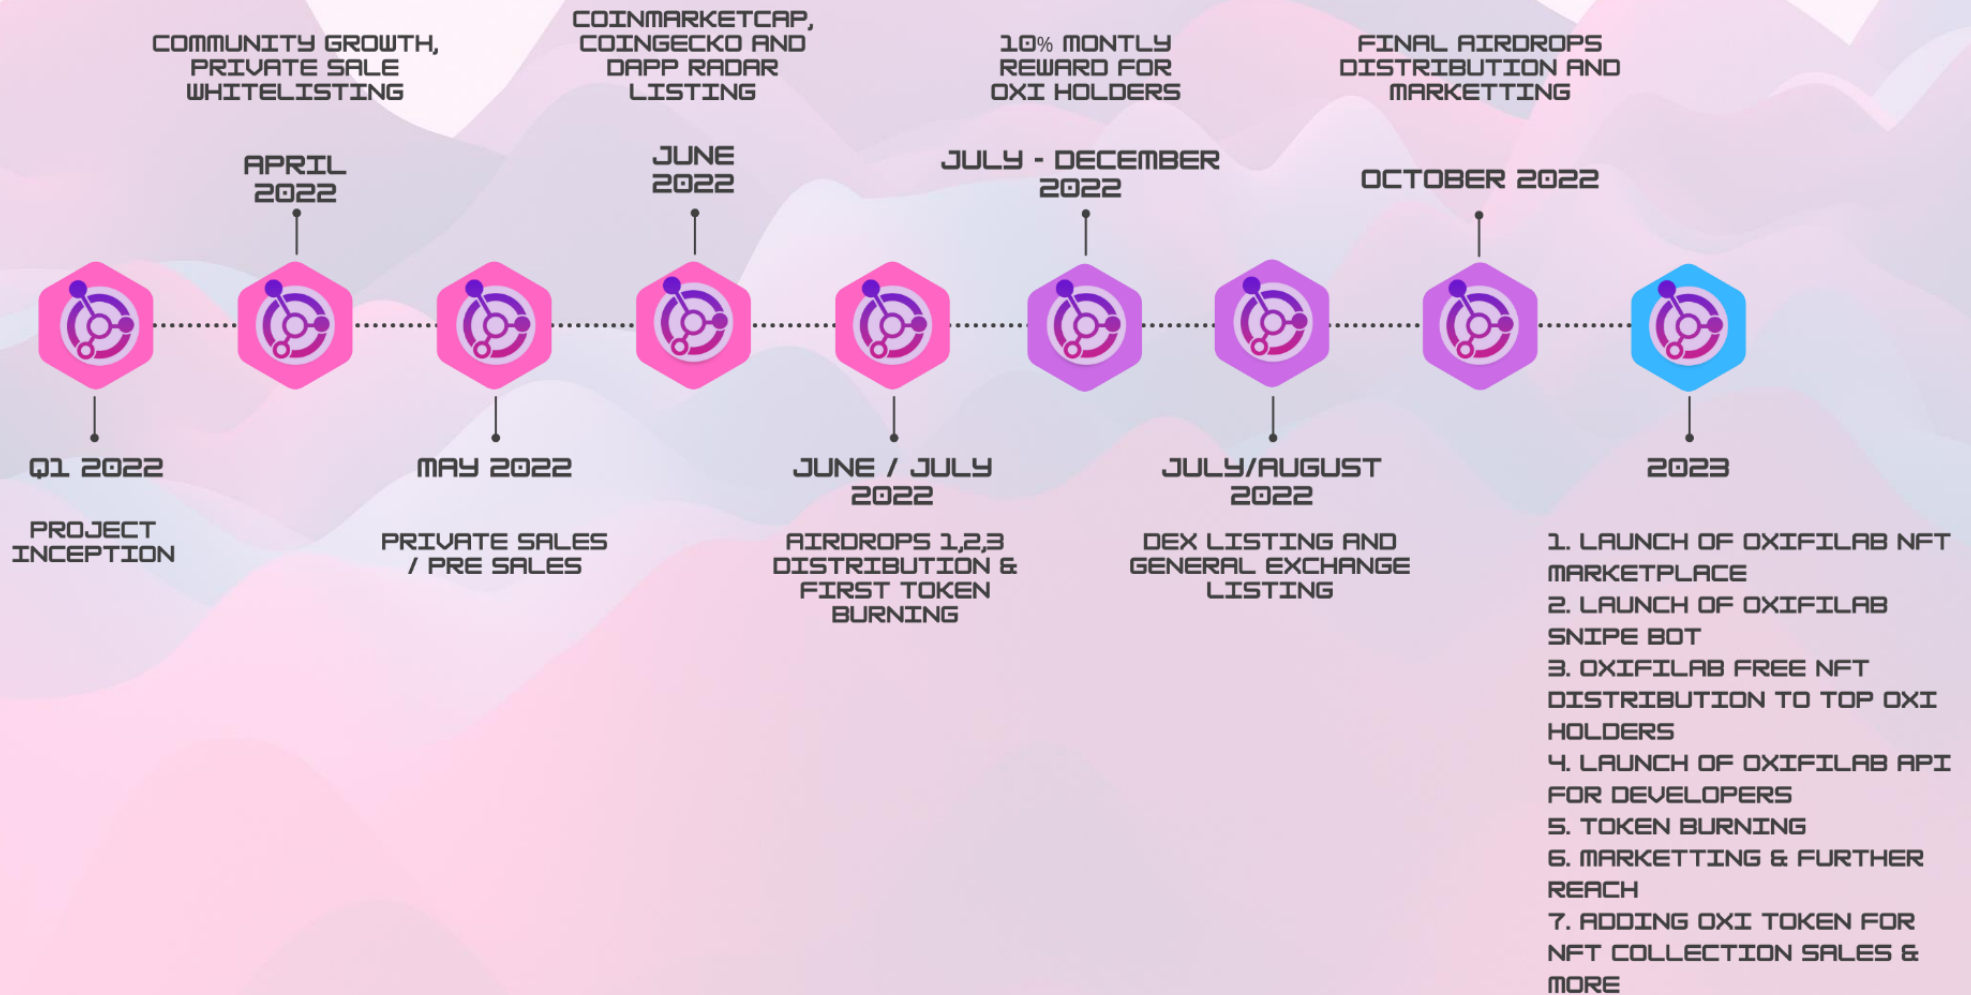

TOKENOMICS	OXI TOKENS (20,000,000,000 OXI)	PERCENTAGE (100%)
Airdrop	1,000,000,000 OXI	5%
Pre-Sales / Private Sales	1,000,000,000 OXI	5%
Public Sales	4,000,0000,000 OXI	20%
10% monthly interest bonus	3,000,000,000 OXI	15%
Airdrops (Series A)		
Airdrops 1: 50,000 Oxi x 10,000 people	500,000,000 OXI	3.5%
Airdrop 2: 20,000 Oxi x 10,000 people	200,000,000 OXI	
Airdrops (Series B)		
Airdrop 3: 20,000 Oxi x 10,000 people	200,000,000 OXI	1.5%
Airdrop 4: 10,000 Oxi x 10,000 people = 100,000,000 Oxi	100,000,000 OXI	
Lock	5,000,000,000 OXI	25%
Team	3,000,000,000 OXI	15%
Pancakeswap 	3,000,000,000 OXI	15%

Hard cap	500 BNB
Soft cap	300 BNB
